

AMSTERDAM INSTITUTE FOR
ADVANCED METROPOLITAN SOLUTIONS

Engineering the future city.

The background of the slide is a wide-angle aerial photograph of Amsterdam during the 'golden hour' of sunset. The sky is a mix of orange, yellow, and soft purple. The city's iconic architecture is visible, including the dark, ornate domes and spires of the Westerkerk and other historic churches. The dense packing of buildings with their characteristic gabled roofs is a prominent feature. In the foreground, a busy street intersection is visible with a yellow tram and several cars. The overall atmosphere is one of a vibrant, historic city embracing modern urban challenges.

AMS Institute is a young and ambitious scientific institute located in Amsterdam. In this institute science, education, government, business partners and social organizations are working tightly together to create solutions for the complex challenges a metropole like Amsterdam is facing. Now and in the future.

RESEARCH THEMES

Working on metropolitan challenges

Smart Urban Mobility

Ensuring an accessible and liveable city by developing smart and sustainable and seamless mobility solutions that can be integrated into the urban fabric.

Urban Energy

Accelerating the urban energy transition, by combining integrated innovations in energy systems with urban (re-)development.

Circularity in Urban Regions

Redesigning resource flows that drive urban activities, whilst establishing integral sustainable urban ecosystems, supported by a new, resilient economic model.

Metropolitan Food Systems

Designing inspiring scenarios to make food systems more sustainable and future-proof, by focusing on core elements such as: economic development, health, mobility and regional attractiveness.

Urban Data & Intelligence

Mobilize new analytical tools to better use urban (big) data and improve city life, while strengthening and safeguarding the democratic values of citizens and society.

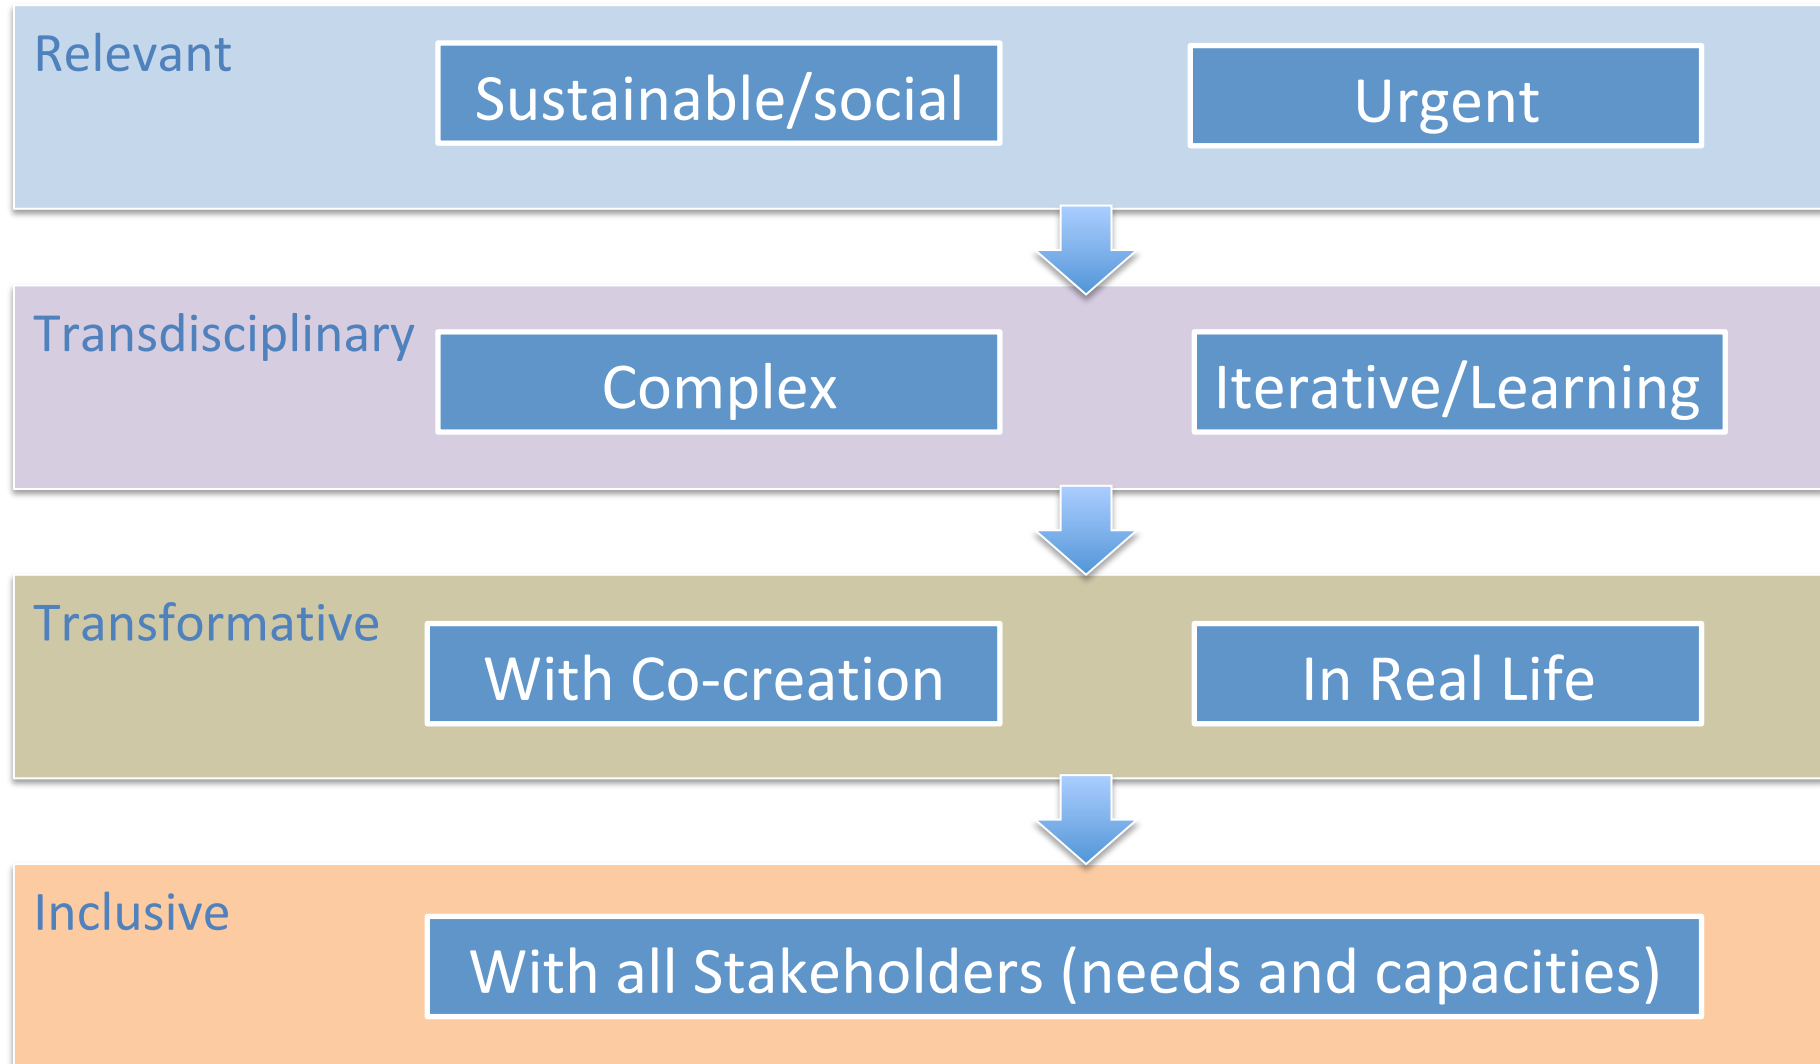

Climate Resilient Cities

Building preparedness and resilience by reducing cities' weaknesses and the impact of climate change: environmental, health related and societal.

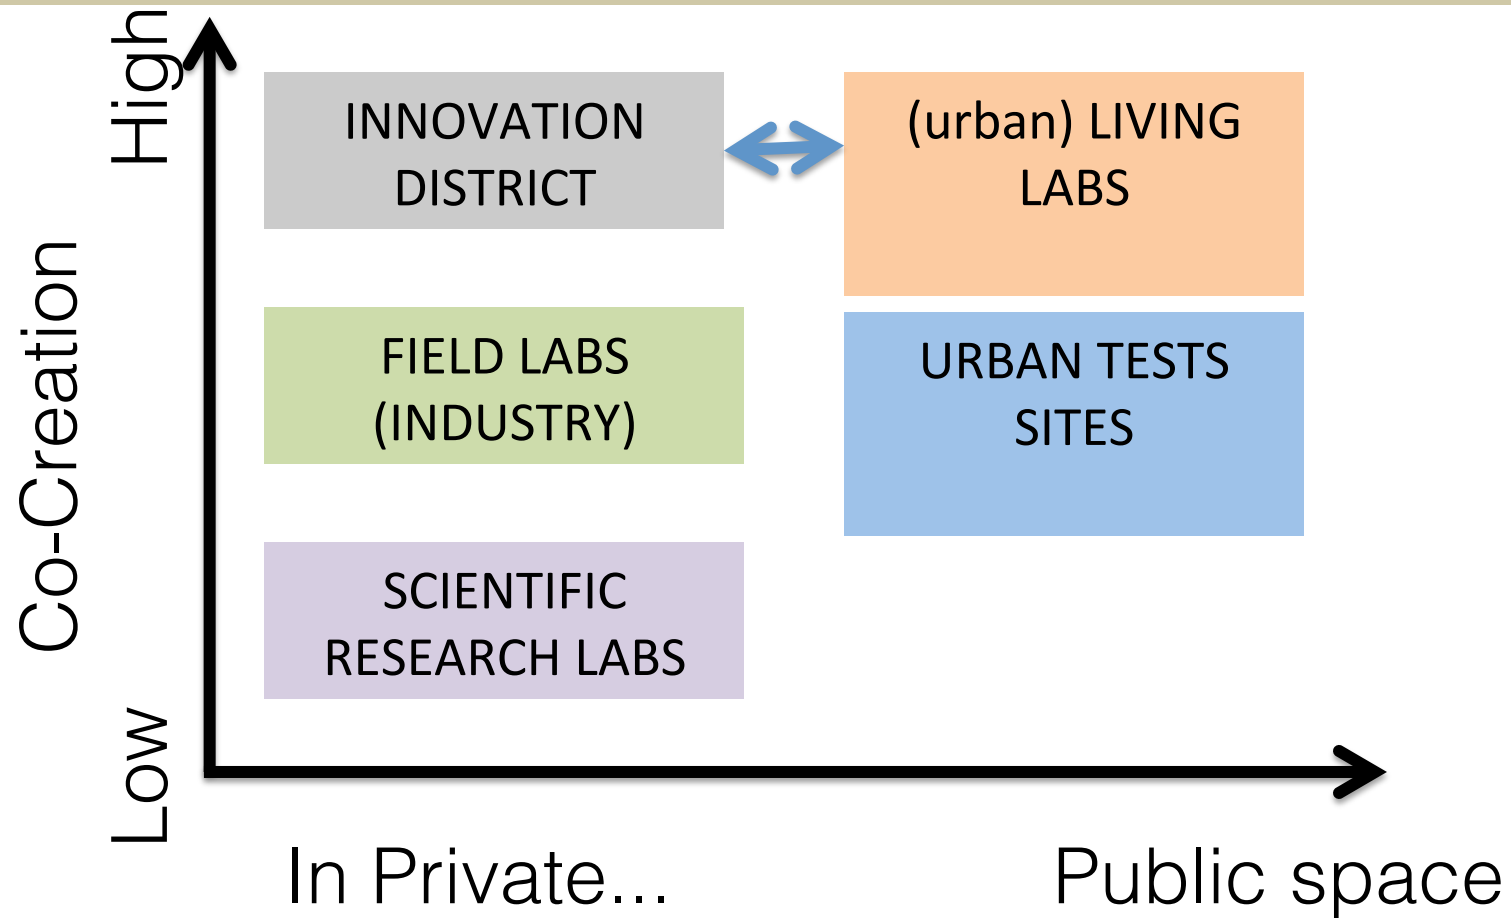

TACKLING METROPOLITAN PROBLEMS

Urgent, social, complex challenges can best be solved iteratively with stakeholders

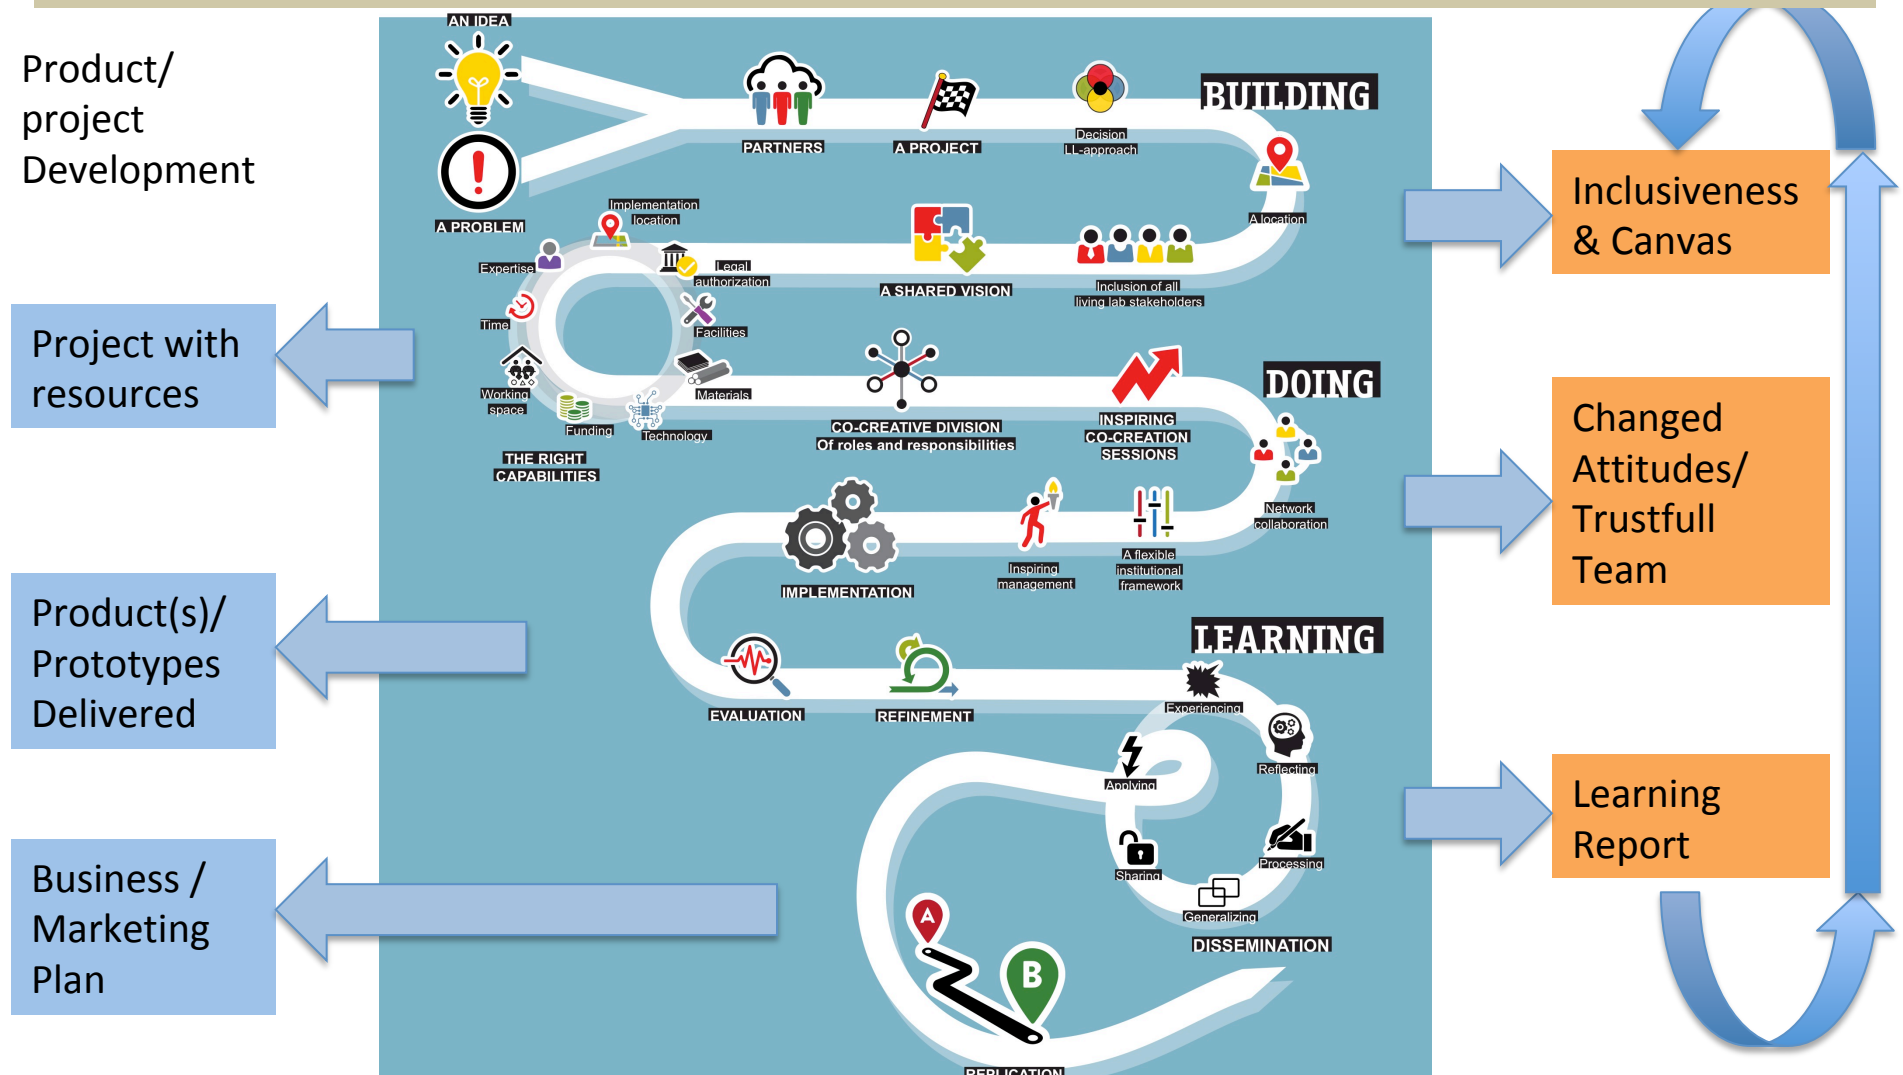

WHAT IS A LIVING LAB?

A space in which real-life experimentation takes place with a diverse participant group in co-creative modes

THE AMS URBAN LIVING LAB WAY OF WORKING

Connecting the world of projects (experiments) with the approach of co-creation, operationalising inclusiveness, changed attitude, and a learning/iteration approach

TOOLBOX UNDER DEVELOPMENT

For the various phases, a set tools is under development as well as criteria which to use when

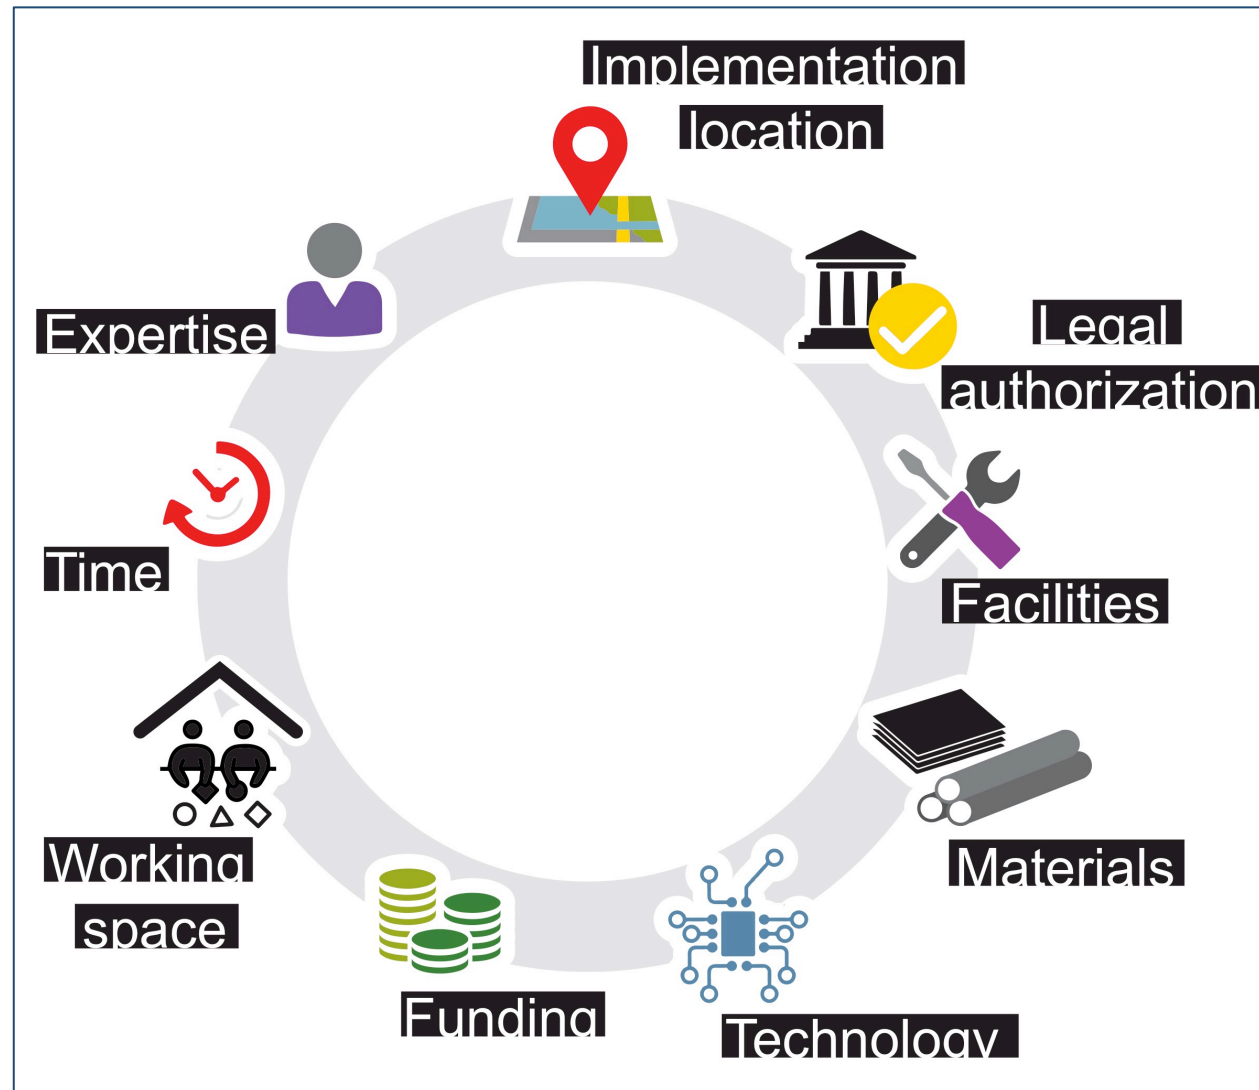

Owner/Curator Phase	AMS	Partners
Design / Process / Vision	The Canvas Geographical mapping	Living Roadmaps (Amsterdam) The Adventure Wheel (MIT)
Stakeholder involvement (trust building)	The GAME	HHS Lego serious Play (HU) Go2Zero game (TUD)
Inclusion / Citizen involvement	Citizen Engagement	Citizen Sensing (WAAG)

TOOLS: LIVING LAB CANVAS

The Canvas will guide labs in development (or in distress) to come to a shared vision; to be used with key questions, in workshop format

General		
Identification and Ideation	Partners and Participants	Outcomes and shared Vision
Scope	Planning and Organisation	Impact & Replication
Review and Evaluation		Internal learning
Canvas Instructions		

TOOLS: PRACTICAL CONDITIONS

AMS URBAN LIVING LABS WAY OF WORKING

A rigorous method, being implemented in projects in > 10 European cities, building up experience and actionable knowledge for various application contexts
